CLAIMS

15

What is claimed is:

- An aqueous coating composition comprising a dispersion of an active
 hydrogen-functional resin and a uretdione compound.
 - 2. An aqueous coating composition according to claim 1, wherein the uretdione compound comprises a structure of:

- wherein R is a divalent alkylene radical, R' is a divalent alkylene, cycloalkylene, arylene, or alkylarylene radical, and n is an integer of 1 to about 50.
 - 3. An aqueous coating composition according to claim 2, wherein n is a sufficiently large number so that the compound is a solid at room temperature.
 - 4. An aqueous coating composition according to claim 1, wherein the uretdione compound is a uretdione of isophorone diisocyanate.
- 5. An aqueous coating composition according to claim 1, wherein the20 coating composition is electrodepositable.

- 6. An aqueous coating composition according to claim 1, wherein the coating composition is cathodically electrodepositable.
- A method of making an aqueous dispersion coating, comprising steps

combining a solid uretdione compound with a molten, water-dispersible resin to form a homogenous resin mixture;

salting the water-dispersible resin if necessary; and dispersing the resin mixture in water .

10

15

- 8. A method according to claim 7, wherein the molten, water-dispersible resin has functionality reactive with the uretdione compound.
- 9. A method according to claim 7, wherein the coating composition contains a further water-dispersible resin having functionality reactive with the uretdione compound.
- 10. A method according to claim 7, wherein the water-dispersible resin20 has quaternary groups.
 - A method of coating a substrate, comprising
 applying the coating composition of claim 1 to a substrate and

curing the applied coating composition to produce a cured coating layer on the substrate.

- 12. A method according to claim 11, wherein the coating composition is applied
- 5 to the substrate by electrodeposition.
